WHERE HUNGER MEETS CAMPUS HUSTLE!

Course Title : Software Project Management (CS-458)

Class: BSCS – 2nd year B (4th Semester)

Team Members:

Humaima Moin (B23110006043)

Lamia Gul (B23110006055)

Neha Rehan (B23110006131)

Sana Ghulam Rasool (B2311006147)

Sania Khan (B2311006148)

Date: / /2025

Problem Statement:

Students at Karachi University face significant difficulties in accessing food during their busy schedules. The university is vast, and canteens are located far apart from one another and from most departments. Due to limited break times and heavy rush at nearby canteens, students often remain hungry or get very little time to eat. Walking to a distant canteen can take at least 30 minutes, and even then, long queues and delays are common.

Students who try to reach other canteens using private vehicles or university transport face additional challenges — waiting times, extra transport costs, and even then, the same crowd and waiting issues. This entire process results in mental and physical stress, increased expenses, and wasted time.

Proposed Solution:

To tackle these challenges, we have decided to develop an online platform called "KU Campus Bite" — a smart and convenient food ordering website for Karachi University students. This platform will allow students to:

- Pre-order food online from any canteen inside the university.
- Get free delivery to their respective departments, saving both time and money.
- Skip long queues by having their food ready for pickup if they choose to go to the canteen.
- Access special offers, discounts, or coupons provided by the canteens through the website.
- Enjoy food on time without compromising their class schedules or rushing between departments.

Benefits:

- No more long waits or hunger during class breaks.
- Saves precious time and reduces physical exhaustion.
- Helps manage expenses more efficiently.
- Improves overall student experience and productivity.

Conclusion:

KU Campus Bite is a smart, student-centered initiative aimed at solving a major problem in a practical way. It ensures students can enjoy fresh meals without leaving their department or wasting time and energy. With this platform, hunger won't interrupt learning anymore.
