

Scope Statement

Project Title

KuCampusBite – University Canteen's Website

Project Purpose:

The purpose of this project is to make it easy for students and teachers to get food quickly and comfortably inside the university. Right now, students waste a lot of time standing in long lines, and many canteens are too crowded. Some students also want to eat from other department's canteens, but it is far and hard to reach. This system will save their time, let them order from any canteen, and get free delivery anywhere on campus. It will also help canteen staff manage orders better and make the canteens less crowded.

Project Objectives:

1. **Project Duration:** 3 months
2. **Reduce Student Travel Costs** – Achieve up to **44% cost savings per order** by replacing physical travel to distant canteens (Rs. 90 average auto fare) with platform-based delivery (Rs. 50 or free).
3. **Save Student Time** – Ensure food delivery within **30–35 minutes** (including preparation + delivery), reducing the current **45–60 minutes of commuting and queuing**.
4. **Increase Accessibility & Reach** – Provide a **centralized ordering platform for all 15 canteens**, enabling students easy access while helping canteens **expand customer reach by 10–20%**.
5. **Enhance Efficiency** – Improve order processing speed by **20% through automation**, reducing manual errors and waiting times.
6. **Ensure Student Satisfaction** – Achieve **60–65% positive feedback** on usability, convenience, and reliability within the **first 3 months** of implementation.

Deliverables:

1. KU Canteen Food Ordering Website– Includes:

- Secure user and admin login
- Guest access without account creation
- Menu browsing and search feature
- Cart management (add, update, remove items)
- Order placement with WhatsApp notification to canteen

- Mobile-responsive design

2. Admin Panel– Allows:

- Managing canteen profiles
- Managing menu items and availability

3. Database– Stores:

- User data
- Canteen data
- Menu data
- Order records

4. Canteen Staff Onboarding Support– Guidance for canteen staff on order handling and availability updates; delivery method to be decided during implementation.

Planned Future Enhancements (subject to time and resources):

- **Menu Filtering**– Price-based and canteen-based filtering options.
- **Ratings & Feedback**– User reviews and ratings for canteens and orders.
- **Menu Availability Update Tool** – A method for canteen staff to update item availability online (e.g., Google Sheet link via WhatsApp or an alternative solution).
- **Help/FAQ Section**– Quick-start guide for students on using the website.

Project Boundaries:

IN_SCOPE:

1. Support for multiple canteens with separate menus, pricing, and delivery policies.
2. Meal pre-ordering, scheduling, and reservation features.
3. Delivery services restricted to locations within the university campus
4. Mobile-responsive website design for easy accessibility on smartphones, tablets, and desktops.
5. Secure user login and canteen profile management with an order and menu management dashboard for staff.
6. Initial training and onboarding for canteen staff.

OUT_OF_SCOPE

1. Off-campus deliveries.
2. Integration with university systems or student ID cards.
3. Multilingual interface (English only in the initial version).
4. Real-time delivery tracking (only estimated delivery time will be shown).
5. Online payment gateway integration (cash on delivery only).
6. Native mobile application (website only).

Assumptions:

1. **Internet Access**-Customers have internet access and can use the website from their phone or computer.
2. **Sufficient Canteen Staff**-The canteen has enough staff to handle both cooking and delivery without delays.
3. **Updated Menu and Prices**-Menu items, prices, and availability are kept up to date by the canteen staff.
4. **4.Order Preparation and Delivery Time**- Orders are prepared and delivered within an agreed time frame (e.g., 20–40 minutes).
5. **Website Browser Compatibility**- the website will work in common web browsers without special software.
6. **Staff Order Management**-Staff will check and confirm orders through the system before preparing food.

Constraints:

1. **Limited Delivery Hours**- Delivery service operates only during canteen working hours.
2. **Internet and Server Dependency**-Website relies on stable internet and server uptime no offline order processing.
3. **Restricted Menu Orders**- Only items listed in the digital menu can be ordered (no “offmenu” requests).
4. **Delivery Time Variability**-Delivery time may be affected by rush hours, weather, or campus events.

5. **Peak Hour Traffic Handling-** Website must handle peak lunch hour traffic without crashing.
6. **Data Privacy and Security-** The system must store and protect customer data according to privacy laws.

Acceptance Criteria:

1. **User Adoption:** At least 200 students of Karachi University actively use the system within the first 2 months of deployment.
2. **Business Growth:** Achieve a 10% increase in the number of orders placed through the system, contributing to higher vendor sales and improved platform engagement.
3. **Order Accuracy:** Maintain a minimum 90% accuracy rate in order preparation and delivery, ensuring user satisfaction and vendor reliability
4. **System Reliability:** The website must have 99% uptime during canteen operating hours and remain stable even during peak traffic (e.g., lunch breaks).
5. **Delivery Performance:** At least 85% of orders should be delivered within the promised timeframe.

Stakeholders:

- Students
- Canteen Owners
- Sponsors
- Cantech Team
- University Staff
- Course Instructor
